

Big x Reality

BXR SUT BOX

NEXT-GEN XR TACTICAL TRAINING SYSTEM

FOR SMALL UNITS

EXTENDED REALITY

Technology Utilizes the most advanced XR technology to create an immersive training environment.

4 PERSON COORDINATED OPERATION

Specifically designed for small tactical units to enhance team coordination and communication.

SAFETY AND FLEXIBILITY

Provides realistic training conditions in a safe environment, adaptable to various training needs.

LOW RISK, LOW COST, AND HIGH IMMERSION

Unrestricted by environmental and venue limitations
Quantifiable analytical data

MEASURABLE OUTCOMES

Provides detailed performance data to support skill development and progress evaluation.

CREATING DEEPLY IMMERSIVE SIMULATION TRAINING

The system instantly displays bullet impact points and detects hit status, increasing training difficulty with dynamic, moving, and randomly appearing targets. It allows for flexible switching between training and testing modes. Weapon transition drills can be conducted with handguns to enhance a trainee's operational fluency and responsiveness in tactical scenarios. The instructor interface supports multi-view switching for real-time monitoring of trainee performance and assists in generating after-action reports for review and analysis.

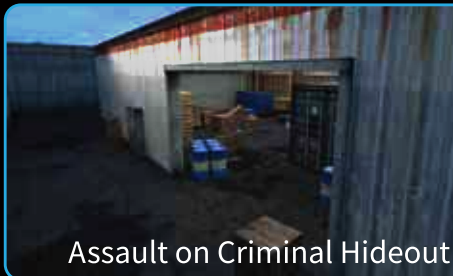

SOFTWARE & TRAINING MODULES

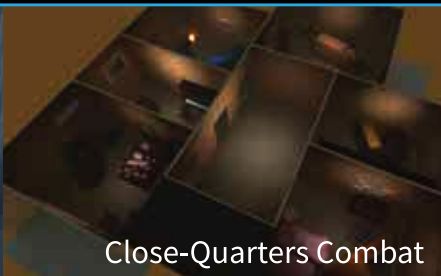

DUAL-TRACK DESIGN: BASIC UNITS + SCENARIO-BASED TRAINING

All modules can be remotely updated with new software.
Supports up to 4 trainees simultaneously and can be integrated with drone-assisted simulation functions.

Scenario Simulation

Assault on Criminal Hideout

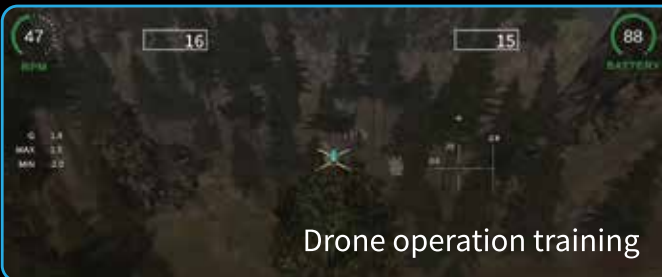

Close-Quarters Combat

Battlefield Simulation

Drone simulation training

Drone operation training

Counter-drone training

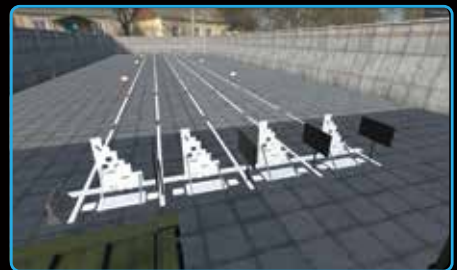

Stationary Shooting

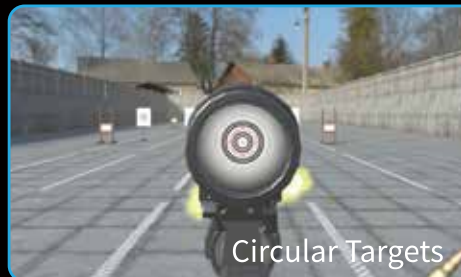

Multiple Target Shooting

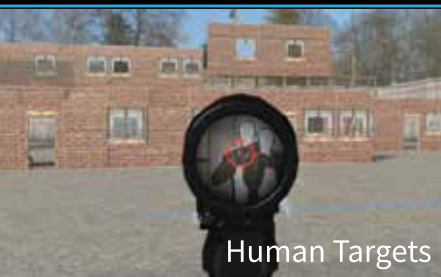

Covering Fire

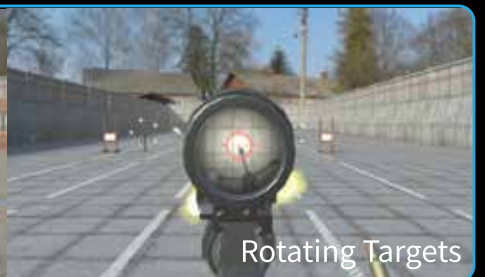

Long-Range Shooting – 20/40/60m

Circular Targets

Human Targets

Rotating Targets
